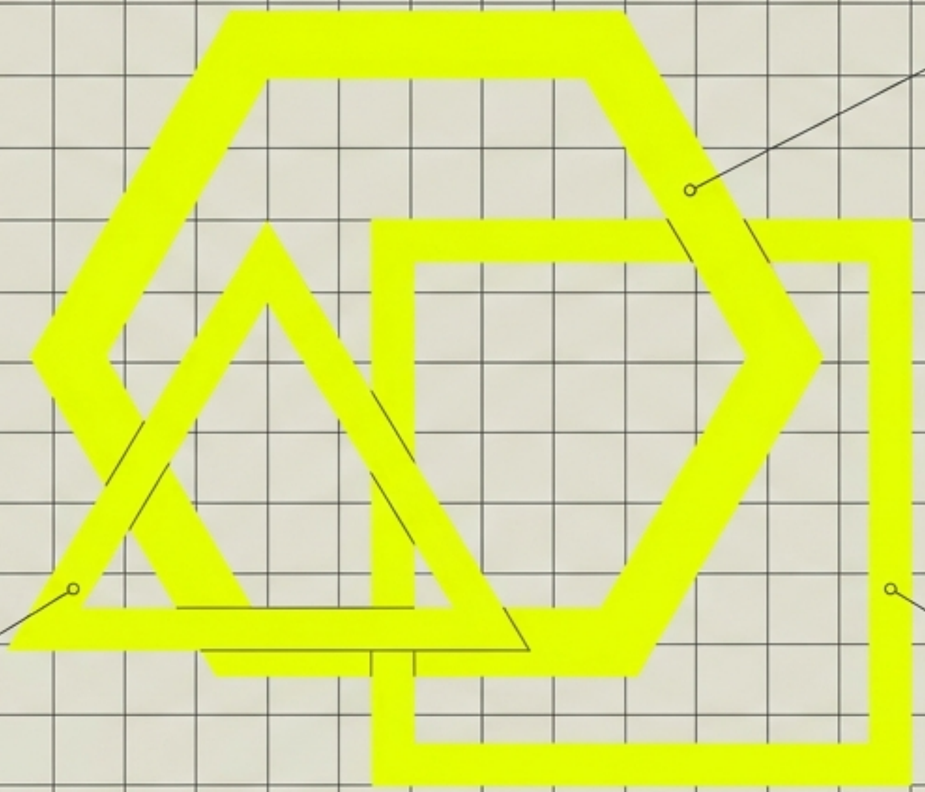
Process

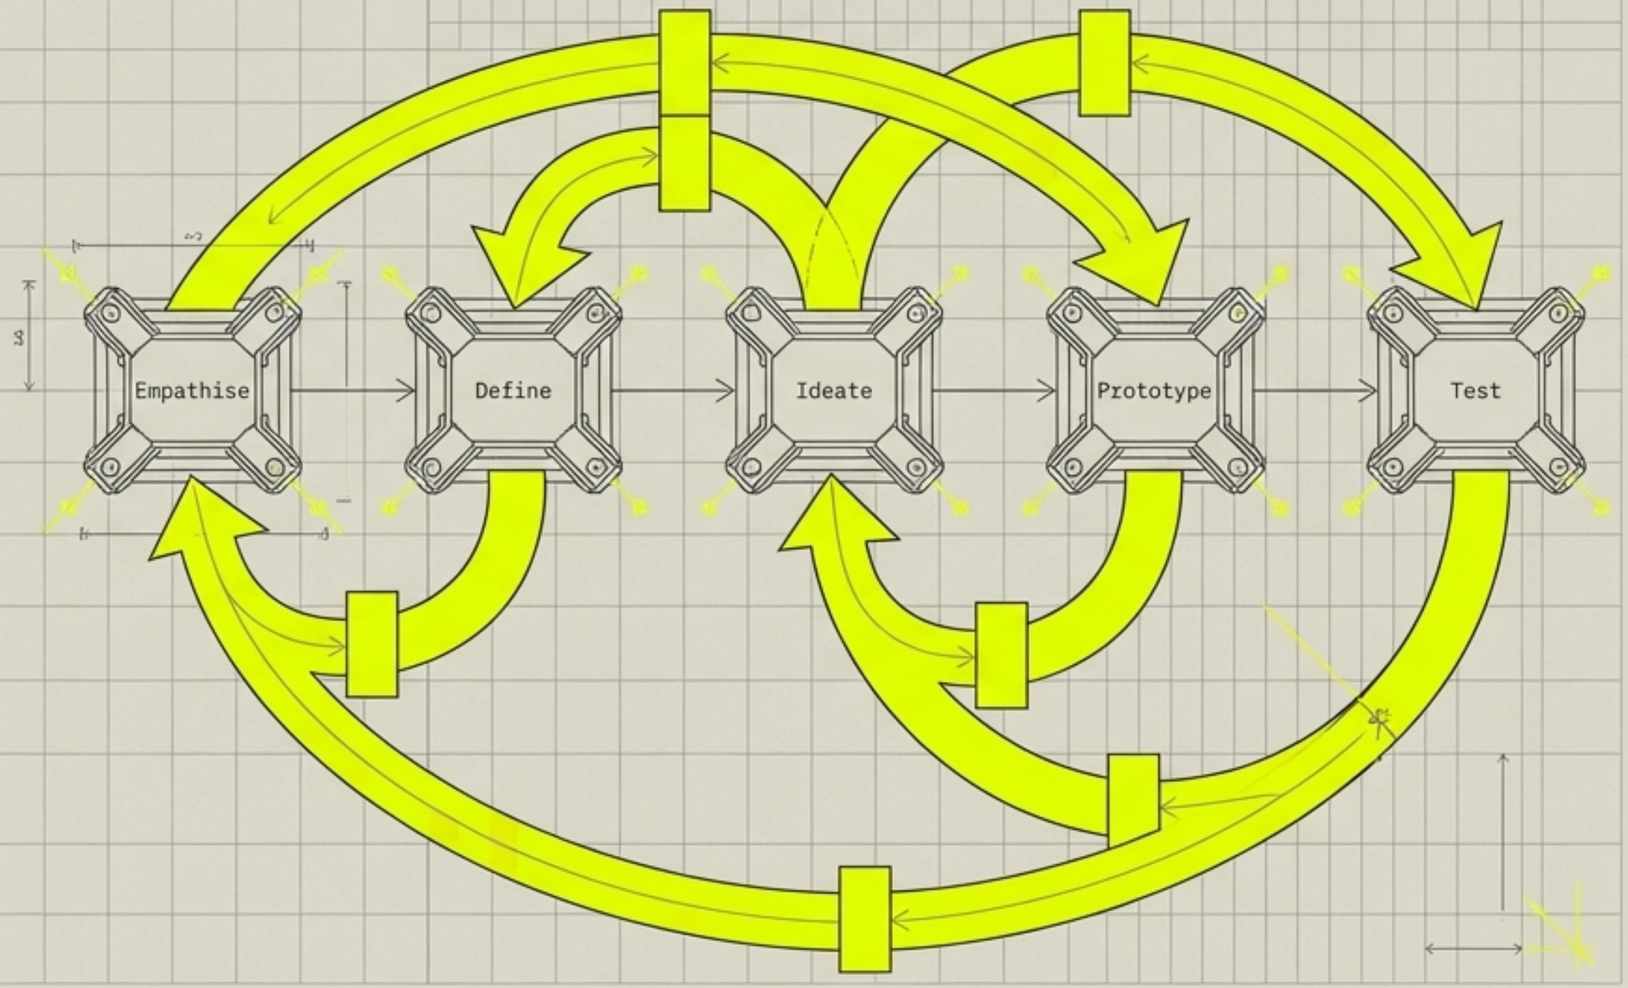
Element 01 of 11 | The What

Structured, repeatable, learnable steps guiding innovation.



The Mechanics of Iteration

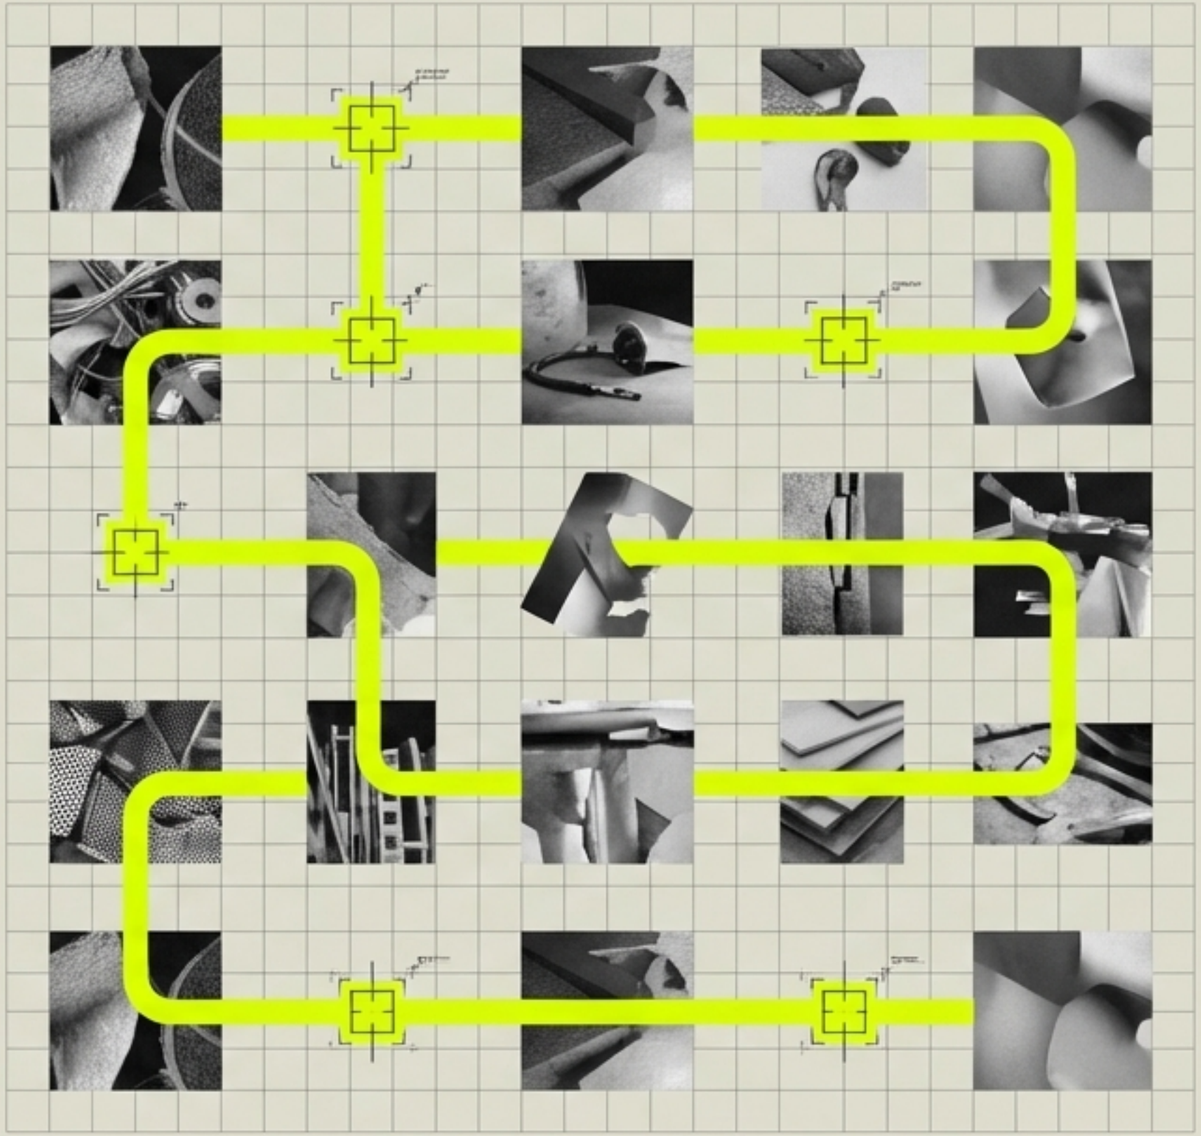
Failure + Gate = Data



Failure is removed from the system. Often, failure to pass through a gate indicates a need to return to an earlier step, replacing failure with a new, better-informed process loop.

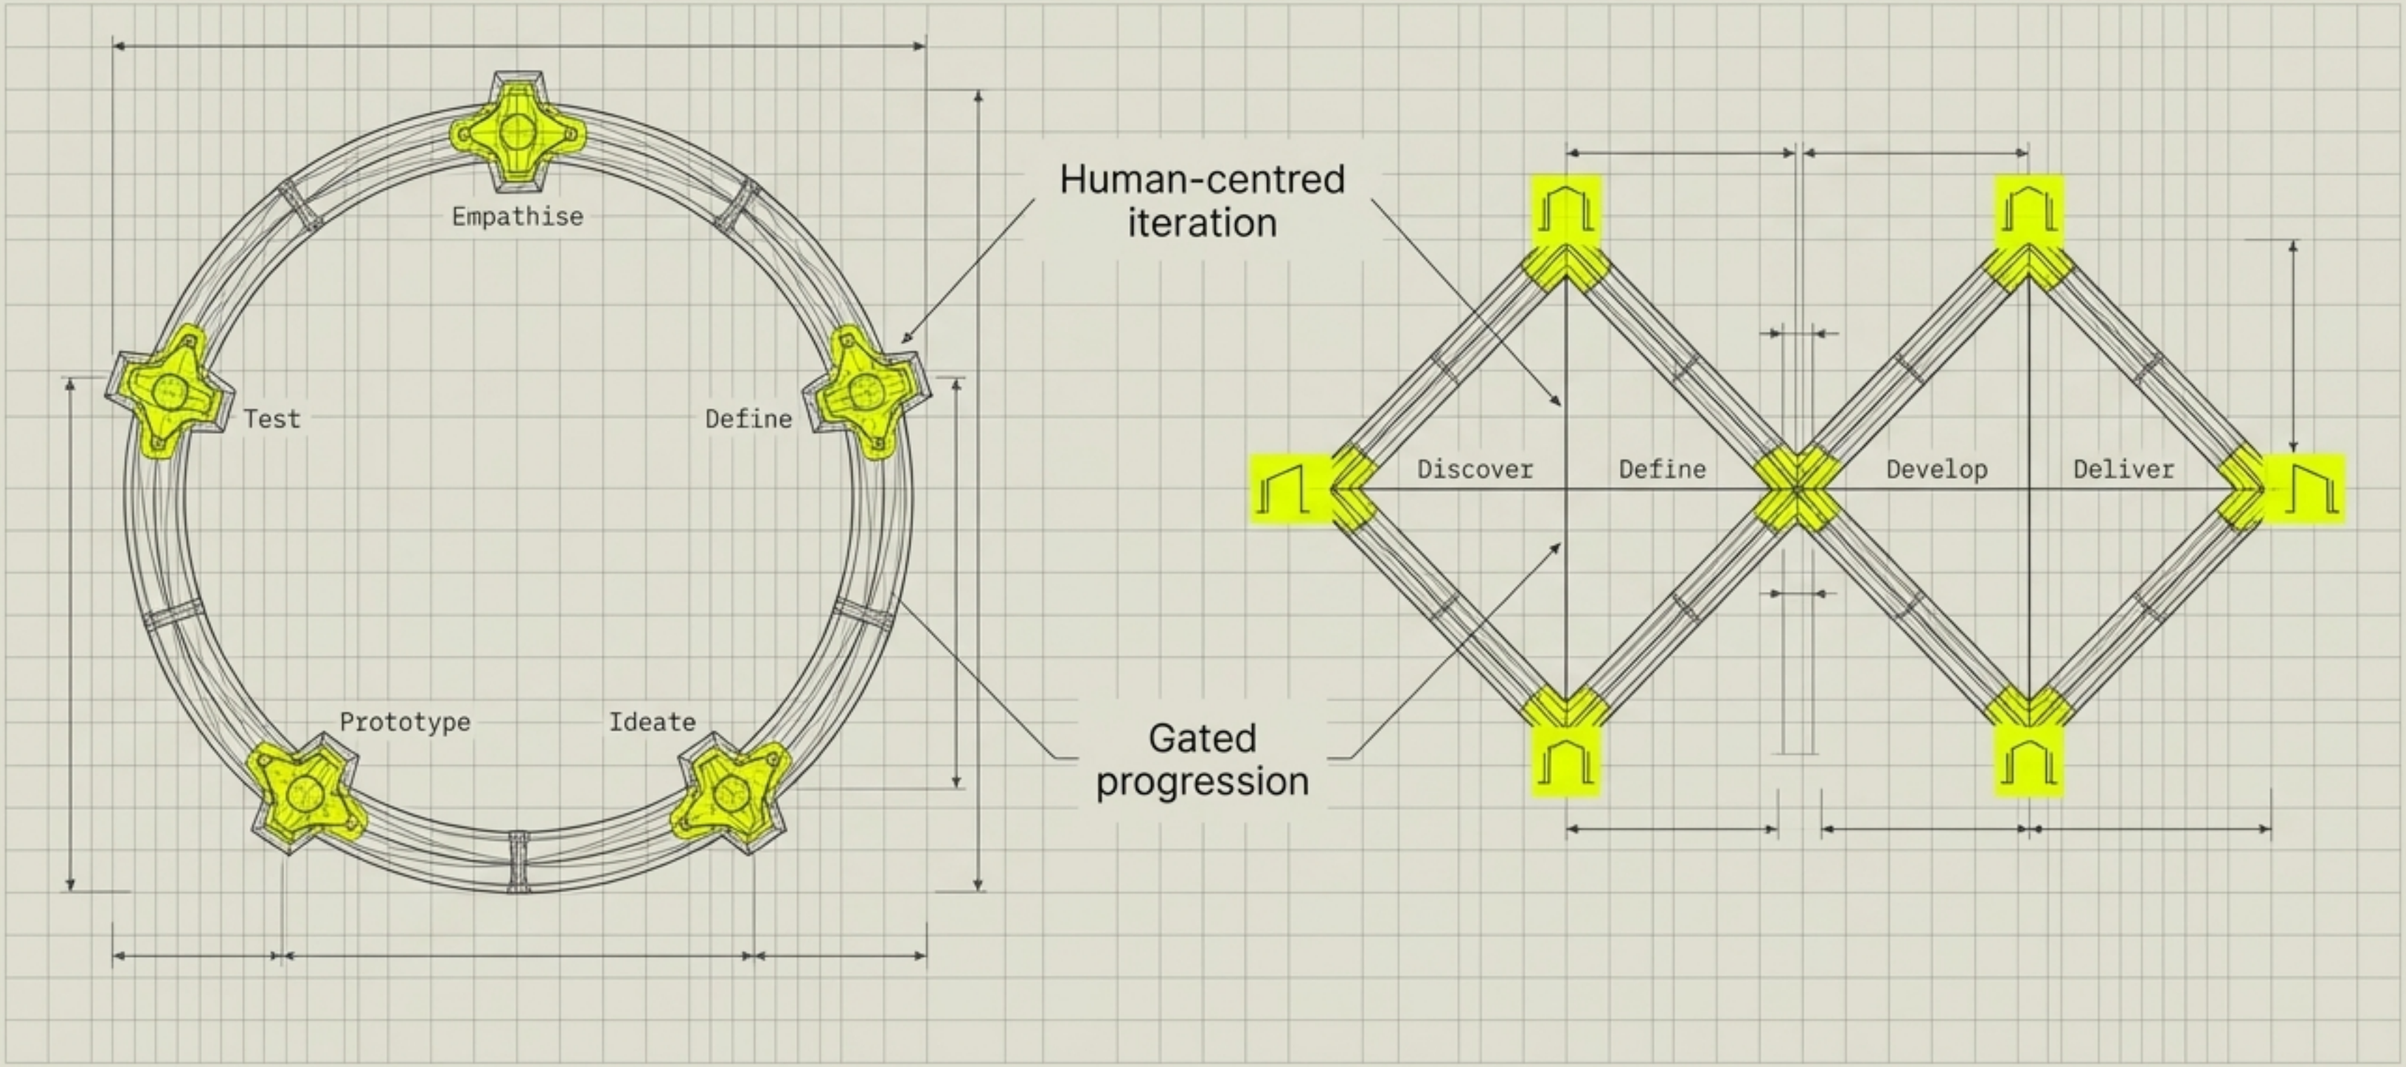
Chaos: Misalignment and premature solutions.

Clarity: Synchronisation and evidence-based progression.



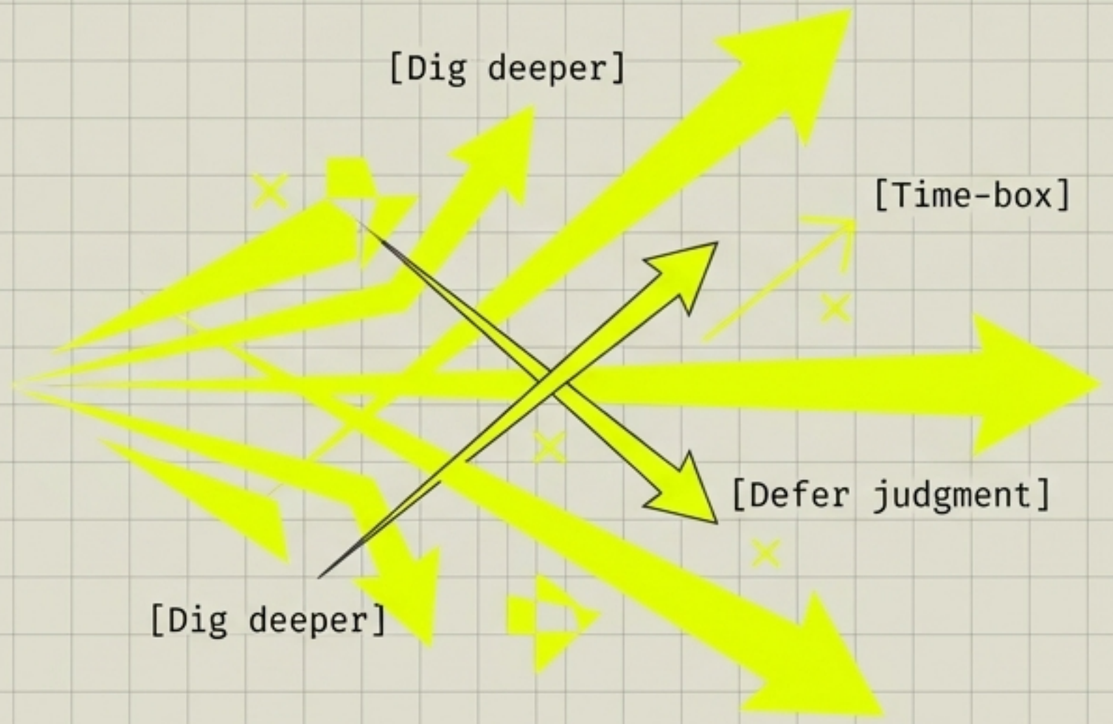
Team alignment. | Coherence & efficiency. | Expectation setting. | Stage-appropriate interventions.

Different Contexts, Shared Architecture



The Map vs. The Moves

Process provides the structure.
It is the map.



Interventions provide the momentum.
They are the moves.
